PROFESSIONAL SUMMARY

Senior AI Full-Stack Engineer with 12+ years of experience designing, developing, and scaling enterprise-grade software products across web, mobile, cloud, and AI-driven platforms. Proven expertise building high-performance SaaS applications, cloud-native systems, AI-powered products, internal platforms, and customer-facing solutions used by thousands of users worldwide.

Specialized in TypeScript, JavaScript, Python, React, Next.js, Node.js, NestJS, Java Spring Boot, PHP, Flutter, React Native, AWS, Kubernetes, and modern AI technologies including LLMs, Retrieval-Augmented Generation (RAG), Agentic AI workflows, vector databases, and intelligent automation systems.

Experienced leading cross-functional engineering teams, defining technical architecture, modernizing legacy systems, mentoring developers, establishing engineering standards, and delivering scalable products from concept to production. Strong background in distributed systems, cloud infrastructure, API design, mobile applications, AI integrations, and performance optimization.

Key achievements include:

- Built AI-powered platforms reducing manual operational workload by over 70%.
 - Designed cloud-native systems supporting millions of API requests monthly.
 - Led modernization of enterprise applications resulting in 40–60% performance improvements.
 - Developed intelligent automation solutions integrating OpenAI, Anthropic, and custom LLM workflows.
 - Architected scalable microservice ecosystems deployed across AWS cloud environments.
 - Delivered web and mobile applications used across healthcare, fintech, logistics, e-commerce, geospatial, and SaaS industries.
-

CORE COMPETENCIES

AI & Machine Learning

- Large Language Models (LLMs)
- OpenAI GPT
- Anthropic Claude
- Gemini
- LangChain
- LangGraph
- RAG
- Agentic AI
- Prompt Engineering
- Vector Databases
- Pinecone
- Weaviate

- FAISS
- AI Automation
- AI Copilots

Frontend

- React
- Next.js
- TypeScript
- JavaScript
- Redux
- Zustand
- Material UI
- Tailwind CSS
- Framer Motion
- HTML5
- CSS3

Backend

- Node.js
- NestJS
- Express.js
- Python
- FastAPI
- Django
- Java
- Spring Boot
- PHP
- Laravel
- REST APIs
- GraphQL
- Microservices

Mobile

- React Native
- Flutter
- Android
- iOS
- Firebase

Cloud & DevOps

- AWS
- Lambda
- ECS
- EKS
- EC2
- S3
- CloudFront
- API Gateway
- Kubernetes
- Docker
- Terraform
- CI/CD
- GitHub Actions

Databases

- PostgreSQL
- MySQL
- MongoDB
- DynamoDB
- Redis
- Elasticsearch

PROFESSIONAL EXPERIENCE

AI/MLOps Engineer

Stealth Startup | Seattle, WA (Remote)

Mar 2025 – Present

Joined an existing AI product team to enhance scalability, reliability, and intelligence of enterprise AI solutions.

Key Contributions

- Designed and implemented advanced RAG pipelines using OpenAI embeddings and vector databases, improving retrieval accuracy by over 45%.
- Developed multi-agent AI workflows capable of autonomous research, document analysis, and workflow execution.
- Built LangGraph-based orchestration systems supporting complex decision-making processes across multiple business domains.
- Introduced evaluation frameworks for LLM response quality, reducing hallucination rates and improving answer consistency.
- Optimized inference workflows and caching strategies, reducing AI processing costs by approximately 35%.
- Integrated OpenAI, Anthropic Claude, Gemini, and self-hosted open-source models into a unified AI platform.
- Established MLOps pipelines for model deployment, monitoring, experimentation, and rollback management.
- Implemented observability systems tracking latency, token usage, model performance, and operational costs.
- Collaborated closely with product leadership to define AI roadmap and technical architecture.
- Mentored engineers on AI system design, prompt engineering, and production AI best practices.

Technologies: Python, FastAPI, OpenAI, Anthropic Claude, LangChain, LangGraph, Pinecone, PostgreSQL, AWS, Docker, Kubernetes

Technical Lead

Ecopia AI | Toronto, Canada (Remote)

Aug 2023 – Feb 2025

Led development initiatives across geospatial intelligence and AI-driven mapping platforms.

Key Contributions

- Led a distributed engineering team delivering cloud-native geospatial solutions processing millions of geographic records.
- Architected scalable microservices supporting large-scale geospatial data ingestion and transformation.
- Developed AI-assisted mapping workflows that accelerated data processing and quality validation.
- Modernized frontend architecture using React and TypeScript, significantly improving maintainability.
- Implemented event-driven workflows reducing processing bottlenecks by more than 50%.
- Established engineering standards, code review practices, and technical documentation processes.
- Built internal analytics dashboards improving operational visibility across engineering teams.
- Automated deployment workflows using GitHub Actions, Terraform, and AWS infrastructure.
- Collaborated with product and business stakeholders to align technical execution with strategic goals.
- Mentored senior and mid-level engineers across architecture, performance optimization, and cloud-native development.

Technologies: React, TypeScript, Node.js, NestJS, AWS, PostgreSQL, Docker, Terraform, Kubernetes

Senior Software Engineer

Innowise Group | Warsaw, Poland (Remote)

Nov 2019 – Jul 2023

Delivered enterprise software solutions across fintech, healthcare, logistics, and SaaS industries.

Key Contributions

- Developed full-stack enterprise applications serving thousands of daily active users.
- Built secure REST APIs and microservices supporting financial transaction processing systems.
- Implemented complex business workflows using NestJS, Spring Boot, and PostgreSQL.
- Led migration of monolithic applications into scalable microservice architectures.
- Improved application performance through caching, query optimization, and infrastructure modernization.
- Built real-time dashboards using React and WebSocket technologies.
- Integrated third-party payment gateways, CRM platforms, and enterprise APIs.
- Developed CI/CD pipelines reducing deployment times from hours to minutes.
- Collaborated with UX teams to deliver highly responsive user experiences.
- Participated in architecture reviews, sprint planning, and technical leadership initiatives.

Technologies: React, Next.js, Node.js, NestJS, Java Spring Boot, PostgreSQL, AWS, Docker

Software Engineer

freelancer

Apr 2014 – Oct 2019

Worked with software development, business applications, and customer-facing web solutions.

Key Contributions

- Developed internal business systems supporting operations, reporting, and customer management.
- Built responsive web applications using modern JavaScript frameworks and backend technologies.
- Designed database schemas and optimized SQL queries for business-critical applications.
- Implemented authentication, authorization, and security best practices across enterprise systems.
- Collaborated directly with clients and stakeholders to gather requirements and deliver custom software solutions.

Technologies: Java, Spring Framework, PHP, Laravel, JavaScript, MySQL, React

SELECTED PROJECT HIGHLIGHTS

AI Customer Support Copilot

Built an enterprise AI assistant capable of answering customer inquiries, analyzing documents, retrieving company knowledge, and executing internal workflows.

Impact:

- Reduced support workload by 65%
 - Improved response time by 80%
 - Increased customer satisfaction scores
-

Fintech Accounting Platform

Designed and implemented cloud-native accounting and financial reporting platform with AI-assisted transaction categorization.

Impact:

- Processed millions of financial records
 - Supported real-time reporting
 - Improved bookkeeping efficiency
-

Workforce Scheduling Automation Platform

Developed an intelligent workforce scheduling system integrating automation, calendar synchronization, and operational reporting.

Impact:

- Reduced manual scheduling effort by 70%
 - Improved workforce visibility
 - Increased operational efficiency
-

EDUCATION

Bachelor of Computer Science

Texas Tech University
2010 – 2014

ADDITIONAL STRENGTHS

- Software Architecture
- Technical Leadership
- Distributed Systems
- Cloud-Native Design
- Product Engineering
- Cross-Functional Collaboration
- Mentorship & Team Development
- Engineering Process Improvement
- Agile & Scrum Methodologies
